ROHACELL® XT

Polymethacrylimide Foam

ROHACELL® XT is a closed-cell rigid foam based on polymethacrylimide (PMI) chemistry, which does not contain any CFC's.

Of all ROHACELL® grades, it is the one best suited for the most demanding process conditions: It can take curing temperatures as high as 180°C and pressures as high as 0.45 MPa. After heat treatment, ROHACELL® XT-HT can even be used at temperatures of 190°C and a pressure of 0.7 MPa. Temperatures of up to 240°C are possible in a pressureless post-cure process, too. These extreme properties make ROHACELL® XT the ideal foam for use with BMI resins, among other materials.

ROHACELL® XT is suitable for autoclave technologies and vacuum infusion processes, not to mention RTM and VARTM processes.

The thermo-formability of ROHACELL® provides a tremendous manufacturing advantage.

ROHACELL® XT is also easy to shape by machining.
